Mixing Tips for Live Sound Engineers | Waves

Live sound mixing is the process of electrically blending together multiple sound sources at a live event using a mixing console. Sounds used include those from instruments, voices, and pre-recorded material. Individual sources may be equalised and routed to effect processors to ultimately be amplified and reproduced via loudspeakers. The live sound engineer balances the various audio sources ...

Audio mixing - Wikipedia

A sound mixer is a device which takes two or more audio signals, mixes them together and provides one or more output signals. The diagram on the right shows a simple mixer with six inputs and two outputs. As well as combining signals, mixers allow you to adjust levels, enhance sound with equalization and effects, create monitor feeds, record various mixes, etc.

How to Use an Audio Mixer (soundboard) : 6 Steps ...

2. Mixer Controls Part One : Let's start with a basic mixer. The sound craft model has most of the controls you will find on any small to medium size analog mixing board. Think of a mixer is a group of individual, mostly identical channel strips with the addition of a master section, this mixer has six identical mono channels. Troops plus three stereo channel strips. Let's start with the Mono channels troop.

Operating the Audio Mixer, A Beginner's Guide to Mixing ...

There are a few possible ways to deal with this. To create a separate mix, there are two options. First, you could have the live audio engineer at your church create the mix with your current sound board by mixing to an aux. For better results, you should have another person mix the live stream in an acoustically isolated location.

Audio Quality Can Make or Break Your Church's Live Stream ...
